

Studying abroad:

To what extent do you believe that studying abroad is a good choice for young people these days?

a. Ideas:

- Why a good choice?
 - Collect hands-on experiences in terms of culture
 - Achieve new skills such as language skills and non-academic skills
 - Making friends
 - World-class educational qualifications
- Why not a good choice?
 - Face home-sickness
 - Cultural conflicts and misunderstanding
 - Not a perfect key to a job

b. Essay:

These days in developing countries, family's finances are significantly improving. This enables a huge number of international students to travel to developed economies to study abroad. In addition to making students more mature and knowledgeable, studying abroad can cause cultural misunderstanding and is not always a guarantee for a good job.

The first advantage of learning in a new country is that students can collect hands-on experiences in terms of culture, lifestyle and how the education system works. This can hardly be learnt via television or the Internet. Secondly, students are able to achieve new skills such as language skills and non-academic skills such as how to live independently and make plans. These non-academic capabilities make students more responsible, well-rounded and mature.

Making friends with people from different backgrounds is a major benefit of studying abroad. These new friends can in turn help students in the future academically and financially. Another reason that drives students to study in developed economies is that universities there provide world-class educational

qualifications. For example, a degree from Harvard or Cambridge can almost guarantee you a job after graduation.

However, studying abroad is not necessarily a straight-forward experience. For new comers, there is a high chance of facing home-sickness, which can negatively impact their ability to concentrate on academic matters. In addition to this, their life may be affected due to cultural conflicts and misunderstanding, which results from the benefit of cultural diversity being mentioned earlier.

Studying in a developed economy is far from a perfect key to a job. Countries such as the UK and the US are introducing policies that make it more difficult for international students to stay after graduation. Furthermore, when it comes to looking for a job, the importance is how knowledgeable and skillful a candidate is, not necessarily which university he went to.

In conclusion, learning overseas is an ideal choice for students whose families are economically wealthy and know how to deal with cultural conflicts. It is far from a perfect choice, but is certainly a good way to increase chances of employment in further stages of a person's life.
